

The C3Grid scenario

The C3Grid provides a central entry point - the Portal. This will be the single sign - on point where all credentials and authentication is taking place. The user only needs a standard web browser as a local application on the PC to take full advantage of the C3Grid infrastructure.

Using C3Grid will ease model setup as well as data comparison and gives a broader scientific community access to model results and observational data.

C3Grid provides different complex standard workflows - varying from simple download of raw data to more complex data processing and diagnosis tools.

User Scenario in the C3Grid
